

Ideation Phase

Brainstorm & Idea Prioritization

Date	30 July 2026
Student Name	Md. Adil Shariff
Project Name	Intergalactic Space Travel Request (ISTR) System
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization

Brainstorming is an essential ideation technique used to explore possible solutions to a problem before beginning development. It encourages creative thinking, allows different approaches to be evaluated, and helps identify the most practical solution based on feasibility and impact.

For this project, brainstorming was carried out individually to analyse the limitations of existing mission request systems and design an automated solution using the ServiceNow platform.

Step-1: Understanding the Problem Statement

Brainstorm & Idea Prioritization

The brainstorming session was conducted to analyse the existing mission request process, identify challenges, and determine an effective digital solution.

Session Information

- Individual Brainstorming Session
- Duration: Approximately 50 Minutes
- Objective: Identify an efficient solution for mission request automation

Before Starting

Before beginning the brainstorming process, the following activities were completed:

Define the Objective

Identify the limitations of traditional mission request systems and understand how automation can improve efficiency.

Research Existing Systems

Study ServiceNow capabilities, workflow automation, approval mechanisms, and enterprise request management.

Prepare the Problem Statement

Clearly define the problem before generating possible solutions.

Explore Possible Solutions

List multiple ideas without restricting creativity, then evaluate each idea based on practicality.

Problem Statement

How might an automated ServiceNow application simplify and streamline the intergalactic space mission request and approval process while improving security, transparency, and operational efficiency?

Brainstorming Principles

- **Focus on solving the problem.**
- **Generate multiple ideas before selecting one.**
- **Consider feasibility and implementation effort.**
- **Evaluate each idea objectively.**
- **Prioritise solutions that deliver the highest value.**

STEP 1: TEAM GATHERING, COLLABORATION AND SELECT THE PROBLEM STATEMENT

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash your imagination and start shaping concepts even if you're not sitting in the same room.

- ✓ 50 minutes in person
- ✓ 3 hours in -collaborative
- ✓ 2-6 people recommended

1 Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

- ✓ **Set the scene:** Define the purpose, invite the right people, and share any pre-reads.
- ✓ **Keep gathering:** Collect any relevant information or research that can help inspire ideas.
- ✓ **Set the brief:** Prepare a concise problem statement or challenge for the session.
- ✓ **Lean into the unknown:** Encourage bold, out-of-the-box thinking. There are no bad ideas at this stage!

[Learn more →](#)

2 Define your problem statement

What problem are we trying to solve? Frame your problem as a How Might We statement. This will be the focus of your ideation.

Problem Statement

How might we automate and streamline the intergalactic space mission request and approval process across multiple departments?

Key rules of brainstorming

Keep an open mind and encourage wild ideas.

- ✓ Defer judgment
- ✓ Encourage wild ideas
- ✓ Build on others' ideas
- ✓ Stay on topic
- ✓ One conversation at a time
- ✓ Quantity over quality

Step-2: Brainstorm, Idea Listing and Grouping

Brainstorm, Idea Listing and Grouping

During brainstorming, several possible features and system capabilities were identified.

Initial Ideas

- **Online Mission Request**
- **Workflow Automation**

- **Manager Approval**
- **Finance Approval**
- **Mission Control Approval**
- **Mission Tracking**
- **Risk Level Classification**
- **Dashboard & Analytics**
- **Email Notifications**
- **Role-Based Access**
- **Planet Database**
- **Mission History**
- **Launch Scheduling**
- **Client Scripts**
- **UI Policies**
- **Service Catalog Item**
- **Business Rules**
- **Flow Designer**
- **Reports**
- **Data Security**

Grouping Similar Ideas

To simplify development planning, related ideas were organised into functional categories.

Mission Management

- Online Mission Request
- Mission Tracking
- Mission History
- Planet Database
- Launch Scheduling

Approval Process

- Manager Approval
- Finance Approval
- Mission Control Approval
- Workflow Automation

Security

- Role-Based Access
- ACL Security
- Users
- Groups

Automation

- Business Rules
- Client Scripts
- UI Policies
- Flow Designer

Reporting & Analytics

- Dashboard
- Reports
- Email Notifications
- Risk Classification

Step-3: Idea Prioritization

Idea Prioritization

Each idea was analysed according to two criteria:

- Importance
- Feasibility

High Importance • High Feasibility

- Mission Request
- Approval Workflow
- Workflow Automation
- Dashboard
- ACL Security
- Reports

These features provide the highest business value while being practical to implement within the project scope.

High Importance • Low Feasibility

- AI Mission Prediction
- Live Rocket Monitoring

These features were identified as valuable but require advanced technologies and additional implementation time.

Low Importance • High Feasibility

- Theme Customisation
- Interface Colour Personalisation

These enhancements improve user experience but are not essential for the initial release.

Low Importance • Low Feasibility

- VR Mission Simulation

This concept was considered outside the scope of the current implementation.

Final Decision

After evaluating all generated ideas, the **Intergalactic Space Travel Request (ISTR) System** was selected because it provides a practical, scalable, and technically feasible solution using the **ServiceNow platform**.

Selected Features

- Service Catalog Mission Request
- Automated Approval Workflow
- Flow Designer
- Business Rules
- Client Scripts
- UI Policies
- Role-Based Access Control
- ACL Security
- Email Notifications
- Reports
- Dashboard

Conclusion

The brainstorming process helped identify the most effective solution for automating intergalactic mission requests. By prioritising features based on importance and feasibility, the project focuses on delivering a secure, efficient, and scalable ServiceNow application. Advanced capabilities such as AI-assisted mission prediction and live mission monitoring have been identified as future enhancements.
