

Functional & Performance Testing

Field	Details
Date	30 July 2026
Student Name	MD.ADIL SHARIFF
Project Name	Intergalactic Space Travel Request (ISTR) System
Maximum Marks	—

Test Scenarios & Results

Functional and performance testing was carried out on the ISTR Service Catalog form, approval workflow, and record-level security, on the Personal Developer Instance.

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Text input validation (Mission Name, Destination Planet)	Enter valid and blank/invalid text in mission_name and destination_planet fields	Valid inputs accepted; mandatory-field error shown for blanks	Error shown correctly for blank mandatory fields	Pass
FT-02	Number/date input validation (Crew Size, Departure Date)	Enter crew_size exceeding spacecraft capacity; enter a past departure_date	Business Rule blocks over-capacity crew; Client Script blocks past dates	Both blocked with correct error messages	Pass
FT-03	Mission request submission (Record Producer)	Fill all mandatory fields and click Submit	Record created in x_2065295_istr_i_space_travel_request with state = Submitted	Record created correctly with expected state	Pass
FT-04	Multi-level approval workflow execution	Approve request as Manager, then Finance, then Mission Control	Flow Designer routes sequentially; state updates at each stage	Workflow executed in correct sequence	Pass
FT-05	ACL / role-based access enforcement	Log in as Mission Requester and attempt to open another user's request	Access denied per ACL	Access correctly denied	Pass
FT-06	Notification delivery	Submit, approve, and reject sample requests	Email sent at each state change (Submitted/Approved/Rejected/Completed)	Emails received at each stage	Pass
PT-01	Catalog form load time	Time the Service Portal form load for the Mission Request item	Should load in under 2 seconds	Loaded in ~1.4 seconds	Pass
PT-02	Approval flow execution time	Time the Flow Designer flow from submission to first approval notification	Should trigger within a few seconds of submission	Triggered within ~2 seconds	Pass
PT-03	Attachment upload load test	Upload multiple mission documents (PDF/images) to a single request	Should upload and attach without errors or slowdown	All attachments uploaded successfully	Pass

Summary

All 9 functional and performance test scenarios passed on the Personal Developer Instance, confirming correct field validation, workflow routing, access control, notification delivery, and acceptable form/flow performance.
